

Table SI.3. Effect of medium flow on albumin and urea production

Production of	Dynamic	Static
Albumin ^a	15±6	11±6
Urea ^b	3.2±0.1	3.1±0.1

a: Albumin protein production in the MCmB (dynamic) *versus* static culture medium, in ng/mL for the same number of cells. Values presented are average±SD of three experiments carried out with three different hepatocyte preparations from different donors (FT297, FT298 and FT301)

b: Urea production in the MCmB (dynamic) *versus* static culture medium, in ng/mL for the same number of cells. Values presented are average±SD of three experiments carried out with three different hepatocyte preparations from different donors (FT297, FT298 and FT301)
